

Maintaining your turbine just got easier

Introducing the re-engineered Conax Exhaust Rake Assembly for W501 Turbines

From Conax Technologies comes a new Exhaust Rake Assembly featuring a hinged “box” design that offers shorter, safer and easier maintenance cycles when changing exhaust rake thermocouples.

Your OEM Solutions Provider

- Exciting temperature sensor technology
- Superior design and quality
- Exceptional engineering support and product knowledge
- On-time delivery

Two quality options

We continue to apply Conax Technologies' high standards of quality engineering and design to the original "can" Exhaust Rake Assembly units. They provide efficient temperature sensor/control for many existing turbine applications.

Improved "box" design saves time and money

Our new "box" assembly units provide the same high-quality engineering design with the added advantage of reduced maintenance time and effort.

Enhanced by Conax engineers, this new Exhaust Rake Assembly:

- Saves money with longer sensor life.
- Ensures safety. The hinged cover junction box allows for quick probe changeout.
- Reduces thermocouple change out time by up to 80%. The junction box allows for easy replacement of the thermocouples. Sensor changes take minutes, not hours.
- Employs higher quality materials, upgraded to handle elevated temperatures without readily oxidizing for increased life.
- Features expert workmanship with improved welding processes.

Easy to order!

Order the Exhaust Rake Assembly by contacting the OEM, or contact Conax directly at the number below.
